Clean Set of Amended Claims

10.   (Amended)   A multi-stacker for an IC (integrated circuit) handler, comprising:

a stacker frame;

a guide frame positioned below and coupled to a bottom of the stacker frame;

a movement plate configured to move upward and downward within the guide frame; and

a plurality of tray plates stacked on the movement plate and configured to move upward and downward within a guide attached to the guide frame and within the stacker frame.
